Potential competing interests: No potential competing interests to declare.

This article is interesting, describing 11 different ways of teaching with technology. It can be improved by citing sources of giants in the different ways of teaching. It was mentioned in the article that the author has analyzed books and websites but there are no citations in the article, only a short reference list at the end of the article (which consists of only websites. Where are the books?) A more in-depth on the literature review on the ways of teaching would be preferable for academic writing. Furthermore, there are no statistics to show the analysis conducted by the author. There were just mere mentions of the different ways of teaching. Nevertheless, it can be very interesting and useful to new young teachers, not in an academic journal but on the blog.
