MT-RNR2 wt Allele

National Cancer Institute

Source

National Cancer Institute. *MT-RNR2 wt Allele*. NCI Thesaurus. Code C131259.

Human MT-RNR2 wild-type allele is located within the circular mitochondrial (MT) chromosome and is approximately 2 kb in length. This allele, which encodes both 16S mitochondrial ribosomal RNA and humanin protein, is involved in mitochondrial protein translation and the negative regulation of apoptosis.
