

# Review of: "Carcinogenesis and Angiogenesis Study Induced by Anthrachinone Plants and Hydroxyanthracen Derivatives in Chicken Eggs"

Ines Banjari

Potential competing interests: No potential competing interests to declare.

Findings are interesting but as presented unlikely to be used by anyone.

A short introduction on why it is important to test the effects of anthrachinone plants on carcinogenesis, backed up with newest literature is necessary.

Methodology is not fully understandable - more details should be added in sufficient detail to enable repeating study results. Pictures/figure need captions and short explanations to be easily understandable (not like now, when you need to guess what am I looking at, especially for the last one).

Only meaningful results should be included in the results. Avoid general sentences.

Grammar check is much needed - it's really hard to understand some parts because you're missing punctuations.

Good luck!
