The authors did a great job in putting together this interesting read. The approach were clear and verifiable. It was really an interesting overview capturing key protective behaviors, risk behaviors, and threats for IoT cybersecurity. I appreciate the systematic process used by the authors to analyze the data both from the quantitative and qualitative methods. I think the outcome of the quantitative further strengthen some of the discoveries at the qualitative stage. I also consider the relevance of the research as quite innovative especially from the perspective of providing some useful information for protecting the IoT users.

I would like to challenge the authors to reflect more implication to the business community and also use some more recent citations as most are quite dated.
