Potential competing interests: No potential competing interests to declare.

The paper concerns the Riemann critical strip. There are some issues, particularly with the English and References. For the language, we suggest a review by a native English speaker. For References, I invite the authors to cite recent results in the theory of zeta functions. Thus, I suggest adding the following references.

1. Fractional derivatives in complex planes. Nonlinear Anal. 71(5-6), 1857-1869, 2009.

2. Formulas for higher derivatives of the Riemann zeta function. Math. Comput. 44(169), 223–232, 1985.

3. Riemann zeta fractional derivative - functional equation and link with primes, Advances in Difference Equations, 2019(1), 261, 2019.

4. The Riemann zeta-function and its derivatives. Proc. R. Soc. Lond. A 450(1940), 477–499, 1995.

5. Fractional calculus, zeta functions and Shannon entropy, Open Mathematics, 19(1), 87-100.

6. On the zeros of the kth derivative of the Riemann zeta function under the Riemann hypothesis. Funct. Approx. Comment. Math. 53(1), 69–95, 2015.
