Review of: "New Approach for Targeting Small Molecule Candidates for Intrinsically Disordered Proteins"

Matteo Rossi Sebastiano¹

1. University of Turin, Italy

The revised manuscript presents a compelling and methodologically innovative contribution to the field of drug discovery, particularly concerning intrinsically disordered proteins (IDPs). The authors have effectively addressed the previous comments, improving the clarity and framing of the ISM-SM methodology and its potential applications. The inclusion of new data further strengthens the work's significance and impact. I appreciate the enhanced explanation of the approach and its computational advantages. Overall, the manuscript is now exemplary, and I have no further comments.
