Congratulations to the authors for the interesting work and relevant topic. I suggest that the authors improve the bibliographic review part. There are few recent references on the main topic, which makes it difficult to position the work in the state of the art. I suggest that you cite and comment on works between 2020-2024 to better position the manuscript's contribution.

In the simulations section, it would be of great interest to readers if there were a more detailed description of how the tests were carried out. For example, if the authors presented a table listing all the parameters of the dynamic equations, it would be quite enriching.
