Potential competing interests: No potential competing interests to declare.

1. The test system used is not mentioned.
2. The load profile for each hour is not mentioned.
3. Which FACTS devices are used and how is it modelled?
4. How is the bulk power system reliability measured?
5. The cases 1,2 and 3 are not defined properly.
6. Without proper generation and load data, how is the LOLP and ENS not supplied calculated?
