Potential competing interests: No potential competing interests to declare.

This study focuses on how students can accept information system technology to support their academic and learning activities. Also, the paper presents a quantitative approach based on the philosophy of positivism to examine the population in a particular sample. The overall structure of the article seems good and quite informative. The language is fluent, and the sections are generally adequate. However, I have a few criticisms of the manuscript that I would like the authors to consider. If these revisions are made, the manuscript is suitable for publication in Qeios.
