Potential competing interests: No potential competing interests to declare.

1. The term "international" may be unnecessary; consider omitting it.
2. Ensure accuracy; you may want to verify this information in relevant literature.
3. Updated references are advisable.
4. Incorporate discussions on personality disorders and genetic influences in your research context.
5. Include recommendations for future research endeavors.
6. Address paranoia and its potential connection to conduct disorder.

Consider the following revised version of your text:

Please note that the initial quantitative depiction of psychiatric comorbidity in children and adolescents within the general population emerged relatively recently in 1987 (Kashani et al., 1987).

For more current references, you can explore the article titled "Exploring the role of genetic factors in personality disorders among women with heroin dependence."

In your research, it is crucial to examine the link between substance use and criminal behavior, including their causal relationship. Additionally, consider discussing personality disorders and genetic factors.

Suggestions for further studies and an exploration of paranoia and its potential correlation with conduct disorder could also enhance the depth of your research.
