Hydroa Vacciniforme-Like Lymphoproliferative Disorder

National Cancer Institute

Source

National Cancer Institute. *Hydroa Vacciniforme-Like Lymphoproliferative Disorder*. NCI Thesaurus. Code C45327.

A rare, EBV-positive cutaneous T-cell lymphoproliferative disorder, composed of CD8 positive cytotoxic T-lymphocytes. It affects children, almost exclusively in Latin America and Asia. Patients present with papulovesicular skin lesions, clinically resembling hydroa vacciniforme, in areas of sun-exposed skin.
