Potential competing interests: No potential competing interests to declare.

The title of this paper is simple and clear, and the main idea can be directly gleaned from the first line in the abstract, which reflects the title of the work. Researchers here discuss their results as they work, and, in my opinion, it's good. For reference, I think all of the references that have been used were relevant and very recent.

The introduction is clear.

Most of the variables defined here were measured appropriately; also, there are enough details that can help other researchers in their future work.

All tables and figures are relevant and clearly presented.
