DST wt Allele

National Cancer Institute

Source

National Cancer Institute. *DST wt Allele*. NCI Thesaurus. Code C104890.

Human DST wild-type allele is located in the vicinity of 6p12.1 and is approximately 497 kb in length. This allele, which encodes dystonin protein, is involved in the structure of cytoskeleton networks. Mutations in this gene are associated with Hereditary Sensory and Autonomic Neuropathy Type VI.
