Spinal Cord Stimulation

National Cancer Institute

Source

National Cancer Institute. *Spinal Cord Stimulation*. NCI Thesaurus. Code C21023.

A highly invasive form of electroanalgesia used to treat various chronic pain syndromes, which resist treatment by more common means. It is also used to treat peripheral ischemia, peripheral vascular disease, complex regional pain syndrome, intractable angina, chronic mesenteric ischemia, and diabetic peripheral arterial occlusive disease. (from White, Li, and Chiu)
