# Pirbenicillin

National Cancer Institute

## Source

National Cancer Institute. *Pirbenicillin*. NCI Thesaurus. Code C66414.

A semisynthetic penicillin with antibacterial activity. Pirbenicillin binds to and inactivates penicillin-binding proteins (PBPs) located on the inner membrane of the bacterial cell wall. Inactivation of PBPs interferes with the cross-linkage of peptidoglycan chains necessary for bacterial cell wall strength and rigidity. This interrupts bacterial cell wall synthesis and results in the weakening of the bacterial cell wall and causes cell lysis.
