Review of: "The Influence of Glycemic Status and Sociodemographic Factors on Patients' Dental Caries Risk and Experience in Lagos, Nigeria"

Ahmad H. Almeahmadi¹

1. King Abdul Aziz University, Saudi Arabia

The small sample size is probably the reason behind the lack of statistical significance between diabetic and non-diabetic groups in regards to caries risk. The work needs major revision in increasing the sample size by looking at similar articles to calculate formulas for proper sample size. Also, the authors should use the CAMBRA caries risk assessment as well.
