

# Review of: "The COVID 19 vaccine patent race"

Gabriel Di Blasi

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

I understand that the Abstract should be more in line with the manuscript since there are topics that were not mentioned in the Abstract.

The conclusion should be more consistent with the manuscript, especially concerning the "plug-and-play characterization of the mRNA vaccine".

Also, In my opinion, the paragraph that starts "A situation like this, where several entities file, ..." seems to be vague and dissonant in relation to the following paragraphs since the scenario about all three applications is not in favor to grant the patent.

The article has a consistent content and has a view that associates the problem of COVID 19 with the development of the vaccines and with protection through patent rights
