# CD4 Positive Naive T-Lymphocyte

National Cancer Institute

## Source

National Cancer Institute. *CD4 Positive Naive T-Lymphocyte*. NCI Thesaurus. Code C97350.

A T lymphocyte that has differentiated in the bone marrow, undergone central selection in the thymus, but has not encountered its cognate antigen in the peripheral circulation. These cells can be identified by presence of both the CD4 and CD45RA molecules on their surface.
