

# Review of: "Low-Carbon Hydrogen Economy Perspective and Net Zero-Energy Transition through Proton Exchange Membrane Electrolysis Cells (PEMECs), Anion Exchange Membranes (AEMs) and Wind for Green Hydrogen Generation"

Behzad Farhang<sup>1</sup>

<sup>1</sup> University of Mohaghegh

Potential competing interests: No potential competing interests to declare.

1: Shorten the title by considering fundamental analyses.

2: Abstract should be improved by adding more sentences related to results.

3: What is the author's perspective on the practicality of such advanced configurations with multiple waste heat recovery systems? What would be their actual application? Do you think that any industry would be keen on adopting it? What are the insights of this research? What is the actual benefit to society from this research?

4: In the parametric study section, give more explanation about each section.

5: The conclusion should be shortened with the main results and achievements of the study.
