The use of tele-medicine or digital technology for medical education is a paradigm shift in teaching and learning medical education. The authors commented on almost all the platforms used for tele-education during the COVID-19 Pandemic. The pros and cons of the use of tele-education in medicine teaching and training via webinar, interviews, virtual reality teaching, online lectures, demonstrations is discussed. It is suggested that tele-education should be made a part of curriculum and faculty and students should be trained for synchronous and asynchronous learning to meet the challenges in future.
