Review of: "Evaluation of Antidiabetic Potential of Gymnema Sylvestre and Metformin Combination in Streptozotocin-Induced Diabetic Rats"

Innocent Edagha¹

1. University of Uyo, Nigeria

Well done to the authors. It is always good science, especially recently, to state 1). the basis for the extract dosage used [GS 600 mg/kg], 2). the lot/batch numbers of drugs/reagents/kits used, 3). the amount of HFD administered in the diabetic study, and 4). whether the citrate buffer was cold, warm, or at room temperature [cold is most preferred].
