Potential competing interests: No potential competing interests to declare.

This review from Al-Hussaniy is an exhaustive evaluation of protein and peptide delivery systems.

Pros:

- it is easy to follow through the different types of nanocarriers, the literatures collected are exhaustive and very informative
- different nanocarriers are described in a easy and intuitive way, giving enough details and references to get deeper understanding of the systems.

Cons:

- figures can be improved, the resolution and figures quality is not at the best.
- natural vesicles such as exosomes, extracellular vesicles or EV-mimicking nanovesicles have not been considered in the review, while recently these types of drug/RNA/peptide delivery system are gaining momentum.

My best.
