Potential competing interests: No potential competing interests to declare.

Overall, the review is clear and recommendable. The structure of the review article is good, and the figures and tables are very clear-cut. However, the article has some minor issues, including:

1. What is the new perspective in this review article?
2. Limitations of using fermentative microbes-induced industrial lactic acid production with feedstock should be included.
3. The article needs proofreading and a grammar check.
