1. In the Finding section, abstract First mentions a number of demographic variables.
2. Explain in the introduction the prevalence of obsession, fear, and self-care behaviors related to COVID-19.
3. Drug addiction and smoking (based on the patient's history), any physical and mental disability, and having a psychiatric illness are the inclusion criteria. There are no exclusion criteria. They are the criteria for non-entry into the study.
4. The reasons for the exclusion of 38 patients in the two groups should be stated with the CONSORT chart.
5. Have the questionnaires in Iran been tested for reliability and validity?
6. Explain the reasons for the alignment or non-alignment of the study results with other studies.
7. Be concluded based on the results of the study.
8. Express the study limitations.
