*Length of stay of patients in Acute Medicine Units at the Royal Hospital, Sultanate of Oman in one month*

*This article is a descriptive, cross-sectional study that has value in the field of research and provides data on length of stay in AMUs.*

*Here are some suggestions to make the article better.*

*1- We know very little about AMUs and LOS. It is important to define the acronym (LOS) and better present the scenario in the introduction.*

*2- In methods, better describe how data collection and data analysis were carried out.*

*3- It is very interesting to characterize the population assisted and to be able to raise and discuss some factors related to the decrease in the length of stay of patients assisted in these units. It enriches the work.*

*4- In conclusion to state that "the Royal Hospital had a length of stay similar to other places around the world" it is important to cite more studies with countries from all continents.*
