Potential competing interests: No potential competing interests to declare.

The author has articulated well the premises of why there should be an open discussion on the vaccination programs and vaccines used against COVID 19. Based on my research, vaccine hesitancy is not grounded on the fear of vaccines but on the regulators' attitudes on the vaccination program. I agree with the author that for the public to submit to any vaccines, raw data should be made available for public scrutiny and open discussion should be encouraged to ward off any potential threat to public safety. In this manner, trust on the regulators' program on vaccination can be strengthened for it is only through transparency that public participation is assured.
