Potential competing interests: No potential competing interests to declare.

The overall effort to explain the relationship among malaria, anemia, and child age is good; however, a few minor and major revisions are needed.

Minor revisions:

- Grammatical mistakes
- Scientific names of species should be italic
- Children age should be mentioned as child age

Major revisions:

- It is not mentioned anywhere that the study was based on malaria caused by which species?
- As it is a spatiotemporal pattern, but no relation with temperature, season, or month-wise is explained.
- The study looks to be based upon surveillance data, not prevalence
- In the methodology, it is not mentioned the year and centers of data collection, collection date, time,
