The method of this study was documentary, but some recent work has been done in Iran has been considered. So, I really recommend updating the document. I have list one of them that recently got published and it so related to this work.

Hashemi, M., Zadeh, H. M., Zarghami, M., Demeke, B. W., & Delgarm, R. T. (2023). An analysis of why rehabilitation and balancing programs for aquifers do not meet water organizations' targets (a case study of the Qazvin aquifer in Iran). *Agricultural Water Management*, 281, 108258.

In introduction, a lot of aspects have been covered but should talk about water social problem more , so it is needed to add some examples to point out the importance of social aspect in water resources management and planning.

Totally is it interesting work and so useful, but it needs to address the comment before considering to publish .
