Potential competing interests: No potential competing interests to declare.

Item 2.4: What were the chicken samples washed with?

Figure 1: Growth of *S. aureus* increased with increasing time in all treatments and control. Was it significant? Important to apply statistical analysis.

In the sentence: "and the whey coating containing *B. bifidum* probiotic did not show significant inhibition ( $p>05$ )". There was no significant difference with the control? Be more accurate in your writing.

In the sentence: "However, comparing treatments and controls shows that both probiotic-content coatings significantly reduced *S. aureus* growth." It should be noted that they significantly reduced the growth of *S. aureus* at storage times of 1 and 15 days.
