Dear Editor ,

This manuscript discusses the "Assessment of soil erosion in the Cesar watershed, an initial step toward the restoration of the Cesar River". It is a hot topic and I recommend publishing this manuscript after minor revision.

Reviewer # Elhoucein LAYATI:

- Literature review (Introduction): The literature review must include citations to recent studies from articles published in 2022 and 2023, adding some bibliographic references in the introductory axis.
- It could be more explicit in summarizing specific results, such as the observed increase in erosion rates over different periods and the identification of critical areas. Adding a bit more detail on the key findings would enhance the informativeness of the abstract.

Best regards

Elhoucein LAYATI
