

Review of: "Data Science using openAI: testing their new capabilities focused on data science"

Dr. Mamata Garanayak

Potential competing interests: No potential competing interests to declare.

The Proposed API reads the CSV files, performs statistical analysis on the dataset, having human commands as the starting point, and finally is able to choose what method and library to use, get the results back, and give an evidence-based answer, which is good work. But the author should give the screenshots of their results for more clarification of the proposed work in the result discussion part.
