Review of: "Design of a Smart Motorcycle Parking System based on Wireless Sensor Network (WSN) in a Multilevel Building at Universitas Pendidikan Indonesia"

I.S. Munteanu[1]

1 University Politehnica of Bucharest

To enhance the quality and clarity of the article, here are some suggestions:

Experimental results presentation: Organize the experimental results section in a structured manner. Present the testing results in a clear and sequential format, with appropriate headings and subheadings. Utilize figures and diagrams effectively to visually represent the testing procedures and outcomes.

Discussion of results: Offer a detailed discussion of the experimental results and their implications. Analyze the findings in relation to the research objectives and discuss any limitations or challenges encountered during the experimentation process.

Conclusion and future work: Summarize the key findings and conclusions drawn from the research. Highlight the contributions of the smart parking system and discuss potential avenues for future research and development. Emphasize the practical implications of the study and how it contributes to addressing real-world parking management challenges.

Language and clarity: Ensure that the language used throughout the article is clear, concise, and free of technical jargon. Define any specialized terms or acronyms to improve readability for a broader audience. Use appropriate transitions to maintain coherence and flow between different sections of the article.

FIG. 7, FIG. 11, FIG. 13, FIG. 14 - THEY ARE NOT THE BEST. They give a rudimentary aspect, they give the feeling of something done as an improvisation. It could be effectively absent or revised. Too many images! Fig. 5 is too complex and was not absolutely necessary in the text. Fig. 19 is not clear - it would be better if only one detail of it appeared and this enlarged!
By incorporating these suggestions, you can enhance the overall quality and readability of the article, making it more informative and engaging for readers.

I appreciate the effort of the authors and their desire to convince us of the efficiency of the innovative parking system. It would have been good to develop the conclusion more, with specific highlights of our own completed and operational achievements. Good luck!
