It was a good study that evaluated publications made in an area that is not visible. The authors have organized the article very well and provided guidance for future studies. I believe it can be published after the following revisions are made.

1. Information on how many sections the form developed by the authors to extract the features of biomedical studies consists of and which features of the articles it focuses on should be stated in the materials and methods section.
2. Information about the agreement values of the independent evaluations of 2 authors and how the final decision was reached, as well as kappa score ranges, should be given in the materials and methods section.
