CBLC wt Allele

National Cancer Institute

Source

National Cancer Institute. *CBLC wt Allele*. NCI Thesaurus. Code C97440.

Human CBLC wild-type allele is located in the vicinity of 19q13.2 and is approximately 23 kb in length. This allele, which encodes E3 ubiquitin-protein ligase CBL-C protein, plays a role in the modulation of signal transduction. Mutation of the gene may be associated with acute myeloid leukemia.
