

Review of: "Patterns of Psychosocial Dynamic Factors Surrounding Suicide Notes on Facebook Platforms: A Netnographic Approach"

Amaya Erro-Garcés¹

¹ Universidad Pública de Navarra

Potential competing interests: No potential competing interests to declare.

Methods and data: Member consent and adherence to ethical guidelines are thoroughly established. However, I would appreciate a more detailed explanation of the data analysis methodology, as well as an increase in the number of cases to support the results (authors suggest a longitudinal approach as further research). This is my main concern.

I consider the manuscript to be innovative research.
