Syndactyly-polydactyly-ear lobe syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Syndactyly-polydactyly-ear lobe syndrome. ORPHA:3259*

A rare, genetic, congenital limb malformation syndrome characterized by complete cutaneous syndactyly between toes 1-2, ulnar polydactyly (ranging from nubbins to an almost complete additional finger) and earlobe malformations. Additionally, abnormalities along the medial border of the foot are observed on X-ray imaging. There have been no further descriptions in the literature since 1976.
