The article entitled, "The impact of land use practice on the spatial variability of soil physicochemical Properties at Wondo Genet, Southern Ethiopia", is an interesting topic and it has a potential to get published. Authors require some changes before publish

## Methodology:

1. In the methodology part, there was no mention of the study period (years).

## Result and discussion:

2. The OC content in farmed land seems to be high. Please check it once.

3. Please specify which microbes are used to determine the biomass in MBC and MBN. Author need to properly describe it.

in Table 3 footnote not matching the content

4. The authors need to properly describe the Soil Chemical properties. Geostatistical analysis is not clear, the information's are not properly organize.

## Conclusion:

5. Author write microbes name in conclusion but not mentioned in main content of the manuscript. Please specify it.

Overall it is a comprehensive study and good manuscript and has the potential to get published after incorporation the above suggestions.
