Potential competing interests: No potential competing interests to declare.

TITLE: The title can be re-written to be more enticing to the readers & to be more clear as to the objective of the article (Frequency of COVID-19 disease status among medical students, a multi-centre study)

ABSTRACT: The abstract is clear, to the point & in the correct format.

INTRODUCTION: The abstract is focused & clearly lays out the purpose of the study, backed with sufficient data

MATERIAL & METHODS: Methods described are clear. However, the method used for calculating the sample size has not been mentioned

RESULTS: Results are clear & well-presented. All tables and figures have titles & legends

DISCUSSION: Adequate discussion of the topic with references of previous studies.

REFERENCES: The references are relevant & recent.
