Potential competing interests: No potential competing interests to declare.

This is an interesting study. However, there are major changes that need to be made to the paper to ensure it is complete.

The manuscript requires a careful proofreading.

The research topic isn't clearly outlined in the introduction section.

I would recommend to include some additional details in the statistical part of the methods section.

The data isn't presented in an appropriate way.

The limitations of the study should be pointed out.

It would be better to update the references with more contemporary ones.
