Potential competing interests: No potential competing interests to declare.

Here are some suggestions for further improvement:

- The abbreviations should be explained only once, when the word is used for the first time. For example, "zero trust," "chaotic cryptology," "Machine-to-Machine," etc., are explained several times.
- The authors should use capitalization for "Internet of Things," "Machine-to-Machine," and other abbreviated words, etc.
- Some references are missing (for example, pag. 3, section 1.1, row 6).
- The authors should highlight the overall goal of their work, the originality, and the novelty as compared to others presented in the literature.
