The following points were made for the author's information:

1. The author should take care to present the work in a scientific research format.
2. In the abstract of the research, information about the material and method (number of teachers, the characteristics of the participants, survey details etc.) is insufficient. In addition, the hypothesis of the research should be removed from the abstract. The authors need to make the abstract simpler.
3. Information on research questions and keywords in the Introduction is insufficient. In addition, the information presented is written in a discussion format. Unnecessary information should be removed and information should be given about the research topics.
4. In the Methods section, detailed information about the instruments used (Procedures, surveys, scales, analysis methods etc.) should be given. The authors did not provide more details on how they selected the 50 teachers.
5. Statistical methods used in the study should be explained in the findings/results section. The results of the study, demographic information and regression analysis results should be here.
6. In the Discussion section, the authors should use the results of the study from the theoretical perspective and explain the implications of the study.
7. It should be no detailed information about methodology in the results section of a research paper.
