

Review of: "[Commentary] India's steps towards carbon dioxide monitoring in public assembly spaces for ventilation measurement for airborne infection control and other factors"

César Gómez

Potential competing interests: The author(s) declared that no potential competing interests exist.

The topic is important but short. The author pertinently puts India's laws on indoor air quality control, but when he talks about the association of concentration and the risk of disease transmission, the text is very short, and here the commentary has more importance. It is important to cite more examples of studies that report this association and the risk of transmission of diseases, especially viral ones that affect the respiratory system.
