Potential competing interests: No potential competing interests to declare.

The title of this review is very interesting, but

I cannot recommend publication in its current form.

1-This review includes biological activity, and the title must refer to it.

2-There is a reference under each scheme that needs to be removed from it.

2- The style of drawing is not uniform.

3- Many of the schemes and figures were copied from their sources.

4- The biology part needs more explanations and shows the potency of compounds.

5-This review needs more references.
