Review of: "Integrating Biological Principles into Observational Entropy"

Edward Bormashenko¹

1. Ariel University Center of Samaria, Israel

Formula (1) is erroneous. It is erroneous from the dimensional point of view. It is possible to calculate $\ln$ from the dimensionless value only, and the ratio p/V is dimensional. This is a very bad mistake. See also: Voronel, A. Spatial scales of living cells and their energetic and informational capacity. *Eur Biophys J* **47**, 515–521 (2018).
