Potential competing interests: No potential competing interests to declare.

- The manuscript from “abstract to conclusion” needed to be checked and revised for grammar by an English language expert.
- Authors should add a graphical abstract and highlights to the manuscript.
- Authors must measure enzyme inhibition to confirm theoretical studies and different proteins (Spodoptera frugiperda, Homo sapiens Peptide from Nuclear receptor corepressor 2 (protein), Progesterone receptor (protein), Homo sapiens Cell division protein kinase 6 (protein), and Homo sapiens Escherichia coli) in docking studies.
- Authors must measure biological studies such as in vitro studies on breast cancer cell lines, gene expression, and western blotting analyses for the studied compounds to confirm theoretical studies.
- References must be checked and revised.
