Potential competing interests: No potential competing interests to declare.

There are improvements to this paper, but details of the Moringa oleifera (plant part, standardization details) need to be clearer. What is still lacking is safety data for this trial. As mentioned before, the demographic data of the patients should be included. There are still typos that need to be improved. Other concerns from my 1st comments were not addressed, and therefore the reliability of the data will not be strong.
