Potential competing interests: No potential competing interests to declare.

1. In the results section, they mentioned 18 patients with biliary complications and then 10 and 7 patients? Something does not add up.
2. Not sure what the significance of anemia and biliary complications being mentioned in this paper is?
3. Addition of a graph or a table would be nice.

Overall, significant changes are needed to clarify the focus of the paper and to help readers have a smooth flow of thoughts. Otherwise, the topics of the paper look promising but need some more polishing before being published.
