Tetanus Toxoid Helper Peptide

National Cancer Institute

Source

National Cancer Institute. *Tetanus Toxoid Helper Peptide*. NCI Thesaurus. Code C38134.

Obtained by genetic engineering from the bacterial *Clostridium tetani* toxoid, tetanus toxoid helper peptide QYIKANSKFIGITEL (amino acids 830-844) binds to class II MHC molecules as a nonspecific vaccine helper epitope (adjuvant) and induces an increased (and long term) immune response by increasing the helper T-cell response. (NCI05)
