Potential competing interests: No potential competing interests to declare.

1- Providing a brief preview of the article's structure or methodology in the abstract could help readers understand how the analysis will be conducted and what to expect from the discussion.

2- The article engages with theoretical concepts and historical examples to support its arguments, which is valuable. However, a more explicit discussion of existing literature on Approval Voting, including critiques and alternative viewpoints, would strengthen the article's academic rigor and situational awareness within the field.

3- Some sections of the article contain complex theoretical arguments that may be challenging for readers to follow. Simplifying the language and providing clearer explanations or illustrations could improve comprehension and engagement.
