Review of: "Optimized Low-Powered Wide Area Network within Internet of Things"

Mandeep Kaur

Potential competing interests: No potential competing interests to declare.

Authors have worked on the recent topic that is internet of things and selected power consumption as main parameter. LoRa model has been presented here, its a good research work. There are few suggestions to improve the work as hybrid algorithms can be implemented for better results, Improve the technical language of paper. Results can be improved by considering other aspects also. need to work on the conclusion part, it can be extended. Future scope must be written.
